

# AGGREGATES

Aggregates (gravel, rock, sand) are widely used in drainage applications such as foundation and French drains, septic drain fields, retaining wall drains, and roadside edge drains. Aggregates are used as base materials to stabilize foundations and roads. They can also be used to settle concrete foundations.

We have sand, crushed rock, and gravel on-site for almost every possible application.

# DELIVERY

We can deliver to your home, job site, or off-site location. We can also load your vehicle at our site and send you on your way!

# SNOW & ICE

In the winter, we use our trucks to clear snow and debris from your roads. We can also distribute sand and gravel on icy patches.

Creating and maintaining  
homes & buildings in the Tobacco Valley

*We build roads and landscape hillsides. We dig septic systems and lay foundations. We design RV plots and subdivisions, including utility plans. In the winter, we plow snow and spread sand or gravel to manage ice. In short, we do what it takes to make and keep your home or business safe and economical.*

## ROADS

## Who we are

Kootenai Sand & Gravel has been serving the Tobacco Valley since 2005, but our experience spans the past 30 years. We get your project done on time, on budget, and with all of the quality and consideration that you would expect from fourth-generation Valley residents.

Cameron Hall: (406) 871-3991  
Donavan Truman: (406) 270-1552  
Mandi Truman: (406) 871-2698  
Scott Baney: (406) 291-1455

## What we do

We are the preferred source for gravel, sand, rock, and all your other construction materials. We have aggregate from the best crushed road gravel in the valley to washed rock and topsoil.

We also specialize in road construction, septic systems, RV lot design and development, as well as subdivision consulting, utilities, precast concrete, and landscaping.

*If it has to do with construction, Kootenai Sand & Gravel can do it!*
